The IEEE Computer Society (CS) Kerala Chapter, established in 1985, is the largest Computer Society Chapter in the world, encompassing 48 Student Branch Chapters and more than 2,400 members as of 2025. Recognized for driving change and innovation in computer science and engineering, the Chapter organizes major events like the All Kerala Computer Society Student Convention (AKCSSC) and the All India Computer Society Student and Young Professional Congress (AICSSYC-23).

The Chapter owes much of its success to the commitment and leadership of its dedicated volunteers, whose unwavering efforts have earned them esteemed roles within the IEEE community. Their passion has helped deliver impactful programs that have won awards such as the IEEE Computer Society (Global) Outstanding Chapter Award (2018), Early Career Professionals Engagement Award (2022), and the IEEE Kerala Section's Outstanding Large Society Chapter Award (2023). With an unwavering commitment to excellence, the Chapter encourages collaboration and empowers members to drive meaningful change in the field of technology.

EDITOR'S NOTE

AKHIL RAJ
Secretary,
IEEE Computer Society Kerala Chapter

Welcome to another enriching edition of Compile, the official digital newsletter of the IEEE Computer Society Kerala Chapter. This edition is particularly close to our hearts, as we celebrate a monumental milestone—40 years of CSKS. Four decades of vision, collaboration, and relentless pursuit of technological excellence. And what better theme to mark such a legacy than Quantum Computing—a field that's redefining the very fabric of computation itself.

In this edition, our contributors take you on a thoughtful journey through the mysterious and mind-bending world of quantum mechanics. From foundational concepts like qubits and entanglement to real-world implications and future possibilities, each article aims to make quantum computing both accessible and inspiring. Whether you're a seasoned researcher or a curious learner, we believe these pieces will stir your curiosity and fuel your imagination.

But Compile isn't just about science—it's also a celebration of people, progress, and purpose. We take immense pride in highlighting notable achievements from our vibrant community, including scholarships, international recognitions, and impactful initiatives led by our members. With immense joy, we also acknowledge that CSKS now stands among the top IEEE Computer Society chapters globally in member strength-a reflection of the trust, unity, and shared passion that bind us.

This issue also offers a glimpse into the exciting activities we've hosted over the past months—technical workshops, flagship conferences, inter-chapter collaborations, and student-driven innovations. And as we look forward, a range of upcoming events awaits, designed to engage, uplift, and connect our ever-growing community. With the 40-year legacy as our foundation, we're more inspired than ever to dream forward.

As you journey through this edition of Compile, I hope you experience the same sense of wonder and curiosity that our team felt while bringing it to life. The field of quantum computing can seem distant or abstract—but with every article, we've tried to make it more real, more human.

I'm deeply grateful to everyone—the writers, editors, designers, coordinators, and reviewers—who contributed their time, ideas, and passion to this issue. Your continued support means everything to us, and I truly hope this edition not only informs but also inspires you to explore, question, and dream bigger in this ever-evolving world of technology. I have full confidence that you'll enjoy what we've curated for you. Here's to the next chapter of discovery, together.

Best Regards !

SECURING THE QUANTUM FUTURE: WHEN YOUR ENCRYPTION NEEDS A SERIOUS UPGRADE

The ongoing revolution in quantum computing promises to unlock unprecedented computational power. From drug discovery and materials science to optimizing things we haven't even thought to optimize yet, the potential benefits are immense. However, this same power brings with it a rather significant asterisk for an area equally critical to our modern world: digital security. It turns out that the mathematical problems quantum computers are exceptionally good at solving are precisely the ones keeping our current encryption standards afloat.

As quantum technology advances, our cryptographic defenses need to do more than just keep pace; they need a fundamental redesign. This article explores this critical intersection, examining how quantum capabilities necessitate this cryptographic migration and the engineering efforts required to ensure our digital infrastructure doesn't become surprisingly transparent in the quantum era. This parallel evolution of cryptography isn't just a sideshow; it's an indispensable component for realizing the full, and hopefully still private, potential of quantum technologies.

The core issue became glaringly apparent with Peter Shor's influential work, notably his 1997 paper "Polynomial Time Algorithms for Prime Factorization and Discrete Logarithms on a Quantum Computer". This research essentially handed quantum computers a skeleton key. By leveraging principles like the Quantum Fourier Transform (QFT) for period finding, a sufficiently scaled quantum computer can efficiently break public-key cryptosystems such as RSA and Elliptic Curve Cryptography (ECC).

RSA's security, which relies on the classical difficulty of factoring large semi-prime integers (a task akin to un-mixing two very large buckets of paint), and ECC's security, based on the equally challenging elliptic curve discrete logarithm problem (ECDLP), are both rendered vulnerable. Quantum computers, it seems, are rather good at un-mixing paint. This isn't a problem for some distant future; it has present-day implications.

The "Harvest Now, Decrypt Later" (HNDL) strategy is a patient adversary's game: collect encrypted data today, decrypt it tomorrow with tomorrow's quantum computer. The consequence is clear: our current encryption standards are operating on borrowed time, and a transition to quantum-resistant alternatives is less an option and more an urgent necessity.

In response, the international cryptographic community has been, shall we say, rather busy developing Post Quantum Cryptography (PQC). PQC algorithms are designed with quantum computers explicitly in mind, drawing their strength from mathematical problems believed to be resistant to both classical and quantum attacks. These problems are a different breed entirely from integer factorization or discrete logarithms, and include challenges based on structured lattices (think very complex, high-dimensional grids that are hard to navigate), error-correcting codes, or hash functions.

A pivotal effort in this domain is the PQC standardization process led by the U.S. National Institute of Standards and Technology (NIST). This rigorous, multi-year global bake-off aims to identify and standardize a portfolio of PQC algorithms.

Among the prominent standards emerging is CRYSTALS-Kyber , a Key Encapsulation Mechanism (KEM). Kyber's security is founded on the Module Learning With Errors (MLWE) problem, which operates over polynomial rings and is, one hopes, sufficiently frustrating for quantum adversaries.

Standardizing PQC algorithms is a crucial milestone, but a secure algorithm on paper doesn't protect anyone's data until it's working software. This engineering phase is non-trivial. PQC schemes often involve complex mathematical operations that, if implemented without considerable care, could lead to significant performance penalties in everyday applications.

The development of quantum computing and the evolution of cryptography are deeply intertwined. As quantum machines gain more power, our cryptographic methods must advance in sophistication to maintain security.The transition to Post-Quantum Cryptography isn't just about fixing a looming vulnerability; it's an essential upgrade to ensure the ongoing security and trustworthiness of the digital world as we enter the quantum era.

The work in standardizing PQC algorithms, combined with the dedicated, sometimes painstaking, engineering efforts to build practical implementations, forms the bedrock for future digital confidence. It seems clear that for the foreseeable future, innovation in both quantum technology and quantum-resistant cryptography will need to continue in close concert.

QUANTUM COMPUTING: DEFINING THE NEW RULES OF REALITY

We stand on the threshold of a new era of computation — one grounded, not in silicon chips and binary code, but in the strange and powerful laws of quantum mechanics. Quantum computing is the cutting edge of technological advancement, able to solve problems inaccessible to even the most super of supercomputers. But what is quantum computing, and why should we care?

Normal computers operate by using bits—0 or 1—to accomplish things. Quantum computers operate by using quantum bits, or qubits, that can exist in multiple states at the same time due to the phenomenon of superposition. A qubit can be 0 and 1 at the same time, and it is that which enables quantum systems to calculate enormous amounts of possibilities in parallel. Another feature that marks quantum computers is entanglement—a condition where qubits are entangled so that the state of one determines the other regardless of distance. This dependency makes quantum computers able to carry out operations impossible for ordinary computers.

Quantum computing isn't just about making things faster—it's about opening up new possibilities. It has the potential to revolutionize many different industries:

1. Cryptography

Shor's algorithm and others threaten to render classical encryption obsolete, pushing the world toward quantum-resistant security systems.

2. Drug Discovery

Quantum computing of molecular dynamics can potentially reduce the time and cost of designing new drugs.

3. Optimization

Financial markets, supply chains, and logistics can be optimized better by quantum algorithms for challenging optimization problems.

02
04
06
08
10
12
14
16
18
20

4. Artificial Intelligence

Quantum machine learning will speed up training models in order to build smarter, more responsive systems.

While promising, quantum computing is very much in its infancy. Qubits are extremely sensitive and susceptible to environmental interference—a problem known as decoherence. Error correction remains a formidable challenge, and scaling quantum computers to the point where they are useful will require enormous breakthroughs in materials science, cryogenics, and quantum algorithms. However, giants like IBM, Google, Microsoft, and many startups are heavily investing in quantum technologies. Governments at the national level, realizing its strategic significance, have initiated multi-billion-dollar programs to speed up quantum research.

In addition to efficiency and speed, quantum computing is a paradigm shift. It is a rebellion against the deterministic nature of classical computation and a promotion of a probabilistic, multi-dimensional understanding of information.

This shift in philosophy can give rise to entirely novel ways of understanding the universe itself. Imagine being able to simulate black holes, to crack equations that govern the space-time continuum, or to discover new laws of physics—quantum computing might be the key to opening such doors.

Quantum computing is larger than the next leap in computer science; it's a revolution in technology that will reshape our world. Getting ready for this new world, we must reimagine cybersecurity, educate next-generation quantum researchers, and find applications previously the province of science fiction. We have not yet achieved the full potential of quantum machines, but the era of quantum approaches on the horizon—and with it, a new understanding of what can be.

Mar Athanacious College of Engineering

SPOTLIGHT

The first quarter of 2025 witnessed the successful execution of several remarkable events by the IEEE Computer Society Kerala Chapter. Let's take a brief tour of the key events organized during this period.

The **Annual General Meeting** 2025 of the IEEE Computer Society Kerala Chapter was successfully held on 15th February 2025 at the IEEE Kerala Section Office, Kochi. The session began with the IEEE Code of Ethics, led by Afrah Quamar, Women in Computing Coordinator, followed by a welcome address by Prof. Sarju S., Vice Chair. Mr. Hironori Washizaki, President of IEEE Computer Society, delivered the inaugural address, emphasizing the Society's evolving role in advancing technology. Dr. Mohammad Rawidean, Region 10 Coordinator, offered his felicitations.

Mr. Devanarayanan S.V., Student Representative 2024, presented a review of the year's key milestones. This was followed by the Chair's Address by Dr. Deepthi Sasidharan. The launch of the 40 Years Commemorative Logo was officiated by Dr. Mini Ulanat, Region 10 Coordinator—India, accompanied by a special edition launch video.

Dr. Vishnukumar S., Chair of the Nomination Committee, announced the new office bearers, and Mr. Nathan Jose V., Student Representative 2025, presented the Annual Plan. An awards ceremony recognized outstanding contributions from individuals and Student Branches, followed by the distribution of certificates to volunteers and young professionals. The meeting concluded with a Vote of Thanks by Ms. Nayana S., Treasurer 2025.

On 15 February 2025, an **F2F** session was conducted by the IEEE Computer Society Kerala Chapter at the Kochi Office, IEEE Kerala Section. The session aimed to introduce and connect the 2024 CSKS and 2025 CSKS teams, nurturing collaboration, encouraging knowledge sharing, and building a strong network among participants. The event began with introductions, where each team member had the opportunity to present themselves, their roles, and their contributions.

Throughout the session, valuable advice and insights were exchanged. Experienced members shared their perspectives on teamwork, problem-solving, and best practices for success. The open dialogue encouraged questions, promoting a learning environment where everyone could benefit from shared experiences. The session concluded with key takeaways, where participants reflected on the discussions and shared their thoughts on the experience.

On 5th April 2025, the IEEE Computer Society Kerala Chapter conducted the third edition of **Colloquium** 2025 at CDAC, Technopark, Trivandrum. The event aimed to equip young professionals with new skills, focusing on UI/UX design this year. Colloquium featured talk sessions, panel discussions, and networking opportunities to enhance the participant's learning experience.

The session commenced shortly after the inaugural ceremony with talk sessions on "How to grow beyond as a designer" and "Meaningful Xperience." The panel discussion on "Measuring UX Success: Metrics That Truly Matter" featured a vibrant panel of distinguished guests. The event concluded with an engaging networking session. The event was a resounding success, leaving a positive impact on all the attendees.

To commemorate International Women's Day 2025, the Women In Computing IEEE Computer Society Kerala Chapter launched **SheWrites**, a dedicated article-writing initiative. This contest sought to recognize and amplify narratives of female resilience, courage, and empowerment by highlighting women who have overcome significant adversity.

Ms. Amisha Joseph from the College of Engineering Chengannur was awarded first prize. Second and third prizes were secured by Ms. Krishnapriya M, also from the College of Engineering Chengannur, and Ms. Padmapriya A M from the Government Engineering College Barton Hill, respectively.

On 22nd April 2025, the IEEE Computer Society Kerala Chapter conducted **All about REM & UPE**, an online session to guide its members about the application process of the prestigious Richard E. Merwin (REM) and Upsilon Pi Epsilon (UPE) Scholarships for Spring 2025. The session featured distinguished speakers Sreelakshmi A R, GSAC Secretary IEEE CS Kerala Chapter & REM Scholar Spring 2024, and Reema Shaji, Project Manager at Tinkerhub & UPE Scholar Spring 2022.

The speakers shared valuable insights into the application processes, selection strategies, and the academic and professional benefits of these scholarships. The interactive nature of the session enabled participants, primarily third- and final-year students, to gain a clear understanding of how to approach and excel in the scholarship application journey.

Elever 5.0, the annual flagship program of the IEEE Computer Society Kerala Chapter, for ten months as an all-encompassing skill development experience. Designed to build participant's technical skills, this energetic set of competitions provides a competitive forum for students to display their abilities and challenge each other. The competition began on 14th April 2025 with an original opening challenge called "Time Travel Business Pitch." It was exclusively a new type of competition where contestants had to imagine and pitch startup ideas for the year 2050 as 60-second video pitches, combining ideas for the future with storytelling sense and technical accuracy. Thereafter, the second challenge, "WHATSAPP 1990: UI Rewind," was initiated on 2nd June 2025. Basing its theme on innovative interface design, the challenge asked designers to reinvent WhatsApp as if it had been created in 1990. This throwback-themed competition received 53 creative submissions from student designers across Kerala.

IEEE Computer Society Kerala Chapter conducted **SYNC: Structuring Your Next-Gen Code—Java Edition**, a beginner-friendly, mentor-driven coding bootcamp aimed at introducing participants to Java programming fundamentals. The program was held primarily online from 11th to 16th June 2025, culminating in an offline project showcase and meet-up at the College of Engineering Adoor, with a doubt clearance session on 19th June. Sessions were handled by Mr. Nathan Jose V (Student Representative, IEEE CSKS), Mr. Gauiri Shankar G Nair (Designer, IEEE CSKS), Mr. Nitish M Satheesh (Software Developer, IBM), Ms. Najah Aboobacker (Intern, IBM), and mentor Mr. Viswanatha Kartha V (Development Intern, IBM). Each session was structured with specific learning objectives and included mini tasks to reinforce practical skills.

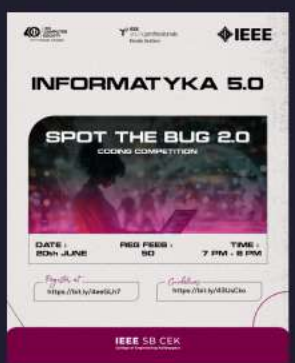

The bootcamp curriculum covered key aspects of Java development in a progressive manner. Participants began with Java basics, syntax, IDE setup, and an overview of the final project, followed by object-oriented programming concepts such as classes, inheritance, and ArrayList. Subsequent sessions introduced GUI development using JavaFX, file handling and data persistence, and techniques for integrating modules and adding customization to applications. The program concluded with a dedicated doubt clearance and project preparation session, enabling students to refine their applications, implement validations, and get ready for the offline showcase. The hands-on, task-driven approach encouraged active learning and skill development throughout the event.

Under the banner of **INFORMATYKA 5.0**, the IEEE Computer Society Kerala Chapter, in collaboration with IEEE Young Professionals Kerala Section and various IEEE CS Student Branch Chapters across the state, successfully organized a dynamic series of 33 engaging events throughout June 2025. The initiative featured a wide spectrum of activities aimed at skill development, innovation, and community engagement. Technical sessions like "RAGify: Building Smarter ML Agents", "Introduction to Power BI", "Cybersecurity Careers Unlocked", and "Internship Decoded" equipped participants with emerging knowledge in AI, cybersecurity, and career readiness, featuring experienced professionals and researchers. Design-centric challenges such as "Pixel Perfect" and "Design Your Story: Portfolio Edition" nurtured creativity, while interactive workshops like "UI/UX Starter Session" and "The Innovator's Pen" enhanced technical communication and user-focused design thinking.

The quiz on Cybersecurity tested awareness, and sessions like "Women in Tech & Hardware", "Plug into IEEE", and "The Internship Edge" promoted leadership, diversity, and real-world preparedness, empowering students to take charge of their professional journeys. Each session, whether a hands-on workshop, competition, or expert talk, was meticulously curated to cater to diverse interests ranging from ethics in AI to practical data visualization. With overwhelming participation, especially from women (often exceeding 60% of attendees), and widespread collaboration among SBs like CUSAT, MITS, and SSET, the initiative cultivated a vibrant, inclusive platform for technical exploration and personal growth, marking INFORMATYKA 5.0 as a standout success in the chapter's 2025 calendar.

Slash Key 4.0 is the upcoming edition of the IEEE Computer Society Kerala Chapter's flagship 30-hour hackathon, scheduled for August 2025. Building on the success of its previous iterations at SJCET, CUSAT, and NIT Calicut, Slash Key 4.0 aims to be a bold and unconventional innovation platform.

This edition will challenge participants to move beyond traditional problem-solving and embrace creativity, humour, and critical thinking. With problem statements designed to inspire offbeat and disruptive solutions, the event encourages the development of projects that question norms, expose hidden flaws, and transform unexpected ideas into powerful innovations. Themes such as "Tech for Satire," "Bug-as-a-Feature," "Reverse Engineering the Norm," and "Future Glitches" will serve as starting points for teams to experiment and push the boundaries of what's possible in tech.

The hackathon will follow a structured format, including an ideation phase, multiple development checkpoints, and a final presentation round. Participants will receive mentorship from experienced professionals and will be evaluated by a panel of industry experts who value originality as much as technical skill. Slash Key 4.0 offers not only a platform for showcasing talent but also a space for networking, collaboration, and exposure to cutting-edge tools and technologies. Backed by previous sponsors like Intel, Wolfram, xyz, and Echo 3D, the event continues to attract visionary partners committed to encouraging innovation and emerging tech talent. With its unique approach and strong community support, Slash Key 4.0 promises to be a one-of-a-kind experience for participants.

The 10th edition of the **All Kerala Computer Society Student Convention (AKCSSC'24)** brought together around 150 enthusiastic students and young professionals from across the state for an inspiring three-day event held from December 13th to 15th, 2024, at Government Engineering College Kozhikode. Organized by the IEEE Computer Society Kerala Chapter in collaboration with GEC Kozhikode, the convention opened with a grand inaugural ceremony that set the stage for a dynamic blend of learning, innovation, and community building.

Participants immersed themselves in skill-enhancing workshops on UI/UX design, full-stack development, and cloud computing, all led by industry experts eager to share practical insights. Beyond the technical sessions, AKCSSC'24 created space for vibrant interaction and teamwork through engaging activities like a campus-wide treasure hunt, networking sessions, and an insightful panel discussion featuring experienced voices from the field. Evenings were enlivened by captivating cultural performances that celebrated creativity and local talent.

Concluding with a heartfelt valedictory ceremony, AKCSSC'24 left a lasting impression by inspiring collaboration, sparking new ideas, and strengthening bonds among Kerala's growing community of computer science students and innovators.

COLLABORATIVE EVENTS

GAME JAM

The IEEE Computer Society Kerala Chapter, in collaboration with IEEE Computer Society SBC RSET, organized **Game Jam**, a 24-hour offline game development hackathon, on 14–15 March 2025 at the Gallery Hall, Rajagiri School of Engineering and Technology. The event brought together developers, designers, and gaming enthusiasts to collaborate, innovate, and showcase their creativity while competing for a prize pool of ₹40,000. Participants benefited from expert mentorship by industry professionals, engaging networking activities like campfire and treasure hunt, and the opportunity to demonstrate their skills in a dynamic, collaborative environment.

Supported by Look4Services, Game Jam featured three tracks encouraging diverse approaches to game development: the General Track focused on originality and gameplay, Use Case Simulation challenged teams to build educational or professional simulation games, and the Digital Twin track explored real-world data integration into games. The event successfully built innovation, community engagement, and talent discovery, providing a vibrant platform for participants to push the boundaries of creativity and skill in game development.

FROM PROMPTS TO PROGRAMS: HOW LLMS AND GENAI ARE SHAPING SOFTWARE'S TOMORROW

IEEE Computer Society Kerala Chapter, in collaboration with IEEE Kerala Section YP and IEEE Kochi Subsection, hosted an expert talk on "**From Prompts to Programs:** How LLMs and GenAI are Shaping Software's Tomorrow" on 24th May 2025 at the IEEE Kochi Office, Kalamassery. Led by Er. Santhosh C. K., Head of R&D Transformations and Operations at Nokia, the session explored how Large Language Models and Generative AI are revolutionizing software development by enhancing workflows, accelerating innovation, and redefining the future, sparking engaging discussions among attendees.

MEMBERSHIP DEVELOPMENT SESSION

Under the banner of Membership Development, IEEE CS SBCs at NSS College of Engineering (NSSCE), Sree Narayana Gurukulam College of Engineering (SNGCE), and College of Engineering Attingal (CEAL), in collaboration with the IEEE Computer Society Kerala Chapter, successfully organized engaging sessions aimed at enhancing student awareness and participation in IEEE CS. The sessions, led by eminent IEEE CS volunteers—Devanarayanan S V (Young Professional), Nathan Jose V (Student Representative), and Vishnu Gopal (Design Engineer and SYP Micro Mentoring Program Volunteer)—offered valuable insights into the benefits of IEEE CS membership, such as international collaboration, access to specialized resources, scholarships, mentorship programs, and professional development opportunities.Each session saw enthusiastic student engagement through interactive discussions and Q&A segments, with speakers sharing their personal IEEE journeys to motivate participants. These initiatives not only encouraged a deeper understanding of IEEE's role in technical and career growth but also strengthened the outreach and community-building efforts of the respective SBCs.

NOTABLE EVENTS

RAKSHA-EMPOWERING SENIORS DIGITALLY

RAKSHA- Empowering seniors digitally was a digital literacy and cyber security awareness session organized by IEEE Computer Society SBC GEC Barton Hill in collaboration with IEEE SIGHT SBC GEC Barton Hill, Thiruvananthapuram, and in association with the Kerala State Literacy Mission. The event was held on 22nd June 2025 at St. Mary's Higher Secondary School, Vizhinjam, Thiruvananthapuram, with the vision of promoting digital literacy and cyber security among senior citizens. This was the first event under PROJECT CHETNA (Cyber Hacking Education for Technical Network Awareness), an initiative by IEEE CS SBC GECBH.

The 3 hour long session was led by Kailas Sri Chandran , Research scholar and former faculty at GECBH who guided the participants with practical insights and hands-on training supported by a dedicated team of IEEE volunteers. The session was adapted to suit the comfort and learning pace of senior participants, focusing on essential digital skills such as basic smartphone usage, secure internet use, social media and digital communication apps.

With enthusiastic participation from learners of State literacy mission and local senior citizens, RAKSHA proved to be a step towards bridging the generational digital gap. The interactive sessions enabled participants to engage with technology confidently, ask questions freely, and gain valuable knowledge that can assist them in their daily lives- from using mobile applications and making online payments to communicating safely online.

Along with digital literacy, RAKSHA also focused on cybersecurity awareness to help senior citizens understand the risks and safeguards associated with using digital platforms. Through relatable and real life examples, participants were guided on how to stay safe while browsing the internet, using messaging apps, and conducting online transactions.

The initiative received overwhelmingly positive feedback from attendees, many of whom expressed gratitude for the opportunity and interest in future sessions. Owing to the enthusiastic response, a second session of the initiative is currently under planning, aiming to expand its impact and reach even more members of our community.

ACHIEVEMENTS

RISING STAR AWARD-IEEE CS SYP ANNUAL AWARDS

Akhil Raj, Secretary of IEEE Computer Society Kerala Chapter, received the prestigious Rising Star Award at the IEEE CS SYP Annual Awards. Recognized for his leadership, dedication, and innovative contributions, Akhil's commitment has significantly strengthened student engagement and impact across Kerala, marking a proud milestone in his professional journey.

RICHARD E. MERWIN SCHOLARSHIP

Ardra Shaji, from College of Engineering Munnar has received the honorable Richard E. Merwin Scholarship for Fall 2024. This prestigious award highlights Ardra's unwavering dedication, exceptional contributions, and commitment to excellence in her field. Her relentless efforts and passion for advancing technology have earned her this esteemed recognition, marking a significant achievement in her academic and professional journey.

HIGHER ORGANIZATIONAL UNITS REPRESENTATIONS

Chethana Raj T – Initiative Lead, CS India Symposium
Chethana Raj T, Chair of GSAC at IEEE CS Kerala Chapter, has been appointed as the Initiative Lead for the CS India Symposium under the IEEE CS SYP Activities Committee MGAB 2025. A dynamic leader known for her strategic acumen and collaborative spirit, Chethana will spearhead impactful initiatives that shape the symposium's vision and engagement at a national scale.

Akhil Raj – Secretary, Communications
Akhil Raj, Secretary of IEEE CS Kerala Chapter, has been appointed as Secretary, Communications for the IEEE CS SYP Activities Committee MGAB 2025. Known for his articulate leadership and strategic vision, this new role aims to amplify voices within the CS community and build deeper global engagement and collaboration.

Devanarayanan S V – Lead, CS Compute
Devanarayanan S V, Vice Chair of GSAC at IEEE CS Kerala Chapter, has been appointed as Lead, CS Compute for the IEEE CS SYP Activities Committee MGAB 2025. His technical acumen, visionary approach, and consistent involvement promise to enrich the CS Compute platform with innovation and impactful content delivery.

Sagar S – Content Curator, CS Compute
Sagar S, SYP Coordinator of GSAC at IEEE CS Kerala Chapter, has been appointed as Content Curator for CS Compute, the official publication under the IEEE CS SYP Activities Committee MGAB 2025. With a keen eye for detail and a passion for meaningful narratives, Sagar will bring depth and resonance to the publication's voice, curating content that informs, inspires, and connects.

Abhirami P – Content Curator, CS Compute
Abhirami P, GSAC Coordinator at IEEE CS Kerala Chapter, has been appointed as Content Curator for CS Compute under the IEEE CS SYP Activities Committee MGAB 2025. Her creative mindset and dedication to impactful storytelling mark a valuable step in shaping compelling narratives and community communication on a global scale.

Raif Iza Muhamed – Content Lead, CS India Symposium
Raif Iza Muhamed, Travancore HSR of IEEE CS Kerala Chapter, has been appointed as Content Lead for the CS India Symposium under IEEE CS SYP Activities Committee MGAB 2025. His passion for meaningful communication and creative ideation will shape narratives.

Sameen Sardar S – Design Co-Lead, CS India Symposium
Sameen Sardar S, Technical Coordinator of IEEE CS Kerala Chapter, has been appointed as Design Co-Lead for the CS India Symposium under IEEE CS SYP Activities Committee MGAB 2025. His artistic vision and meticulous design sensibility will craft visually compelling experiences and elevate the event's identity across platforms.

Vishnu Gopal – Sponsorship Co-Lead, CS India Symposium
Vishnu Gopal, Kochi HSR of IEEE CS Kerala Chapter, has been selected as Sponsorship Co-Lead for the CS India Symposium under the IEEE CS SYP Activities Committee MGAB 2025. With a flair for partnerships and outreach, his efforts are set to drive impactful collaborations and strengthen sponsor engagement.

GRADUATE STUDENT ACTIVITIES COMMITTEE (GSAC)

The Graduate Student Activities Committee (GSAC) is a dynamic group of passionate young professionals and student young professionals dedicated to building vibrant campus and professional life. Through creative initiatives, engaging events, and collaborative projects, GSAC aims to build a stronger sense of community and inspire meaningful connections among students and professionals. Guided by fresh perspectives and shared enthusiasm, the committee works to turn ideas into impactful experiences, enriching every step of the journey.

STUDENT SCHOLARSHIPS & AWARDS

RICHARD E. MERWIN SCHOLARSHIP

To Recognize And Reward Active Student Volunteer Leaders In Student Branches Or Chapters Who Show Promise Academically And Professionally.

Deadline : 30th April & 30th September 2025

UPSILON PI EPSILON AWARD

For All Graduate And Undergraduate Students Who Are IEEE Computer Society Members And Full-Time Students At An Academic Institution Are Eligible.

Deadline : October 31 Of Each Year

LANCE STAFFORD LARSON BEST PAPER AWARD

For Papers Presented At A Computer-Related Conference Or In A Publication. This Award Encourages Students To Develop Excellence In Their Communication Skills And To Motivate Students Toward Achievement In The Field Of Computer Science.

Deadline : October 31 Of Each Year

IEEE CS MEMBERSHIP BENEFITS

- Magazines, Research, Journals, And Conference Proceedings: 18 Complimentary Articles Per Membership Year From The Most Trusted Source In Computing.
- Spectrum Magazine: IEEE's Flagship Publication, Available To Those Who Belong To Both IEEE And IEEE CS.
- IEEE Open Journal Of The Computer Society: Save $350 On Publishing Papers With Your IEEE Computer Society Membership.
- IEEE Computer Society Digital Library

  Access The Premier Collection Of Technical Periodicals And Conference Papers. INCLUDED With Student Membership.
